FOR IMMEDIATE RELEASE

Calgary, July 3, 2008

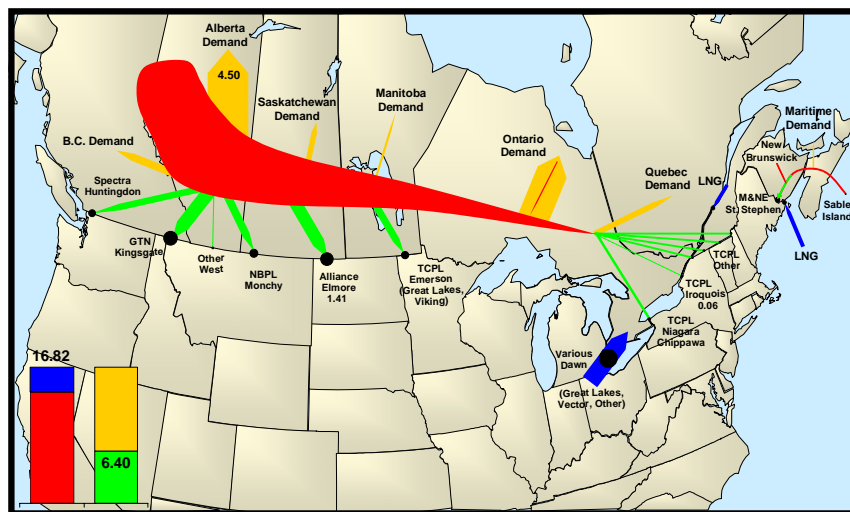

**Ziff Energy Report:
 Canadian Gas Exports to 2020**

Ziff Energy announces the release of a report assessing Canadian gas exports to the US to 2020. The report leverages analysis from Ziff Energy’s views of Western Canada Gas Supply (May 2008), Alaska/Mackenzie Gas Supply (March 2008), and Ziff Energy’s detailed report covering gas demand by province and state, and by sector (residential, commercial, industrial, power generation, and pipeline fuel). This gas export assessment reflects Ziff Energy’s views of Canadian LNG imports to Eastern Canada, and our views of growing gas imports from the USA via Vector/Great Lakes.

“Western Canadian gas production decline, combined with growing gas requirements for oil sands production, and increasing demand for gas fired power generation, most notably in Ontario, conspire to reduce natural gas available for export to the United States” concludes Cameron Gingrich, Manager, Gas Services, and lead author. Policy makers and the oil sands industry must encourage and develop clean and low cost alternatives to natural gas as production in the basin declines, to ensure gas exports remain robust.

Figure A4 (from the report) presents a snapshot of Canadian natural gas consumption by province (gold), supply (red), exports to the US (green), and imports into Canada (blue).
